

THE NEW BITFINS

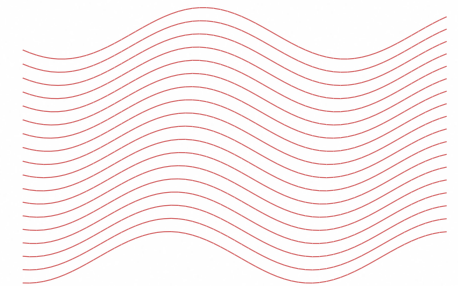

BETA PLANNED
Q4 2026

bitfins

Sea Paper

Your Digital Sanctuary

The rebrand, the OG collection revamp
and the next BitFins experience

FULL RELEASE PLANNED Q1 2027

A More Connected BitFins

BitFins is Your Digital Sanctuary. This update brings more ways to enjoy your collection, connect with your aquarium and earn rewards through activity.

You might come to build an aquarium, find a favorite creature, explore someone else's collection or take a photo. The update brings those experiences closer together.

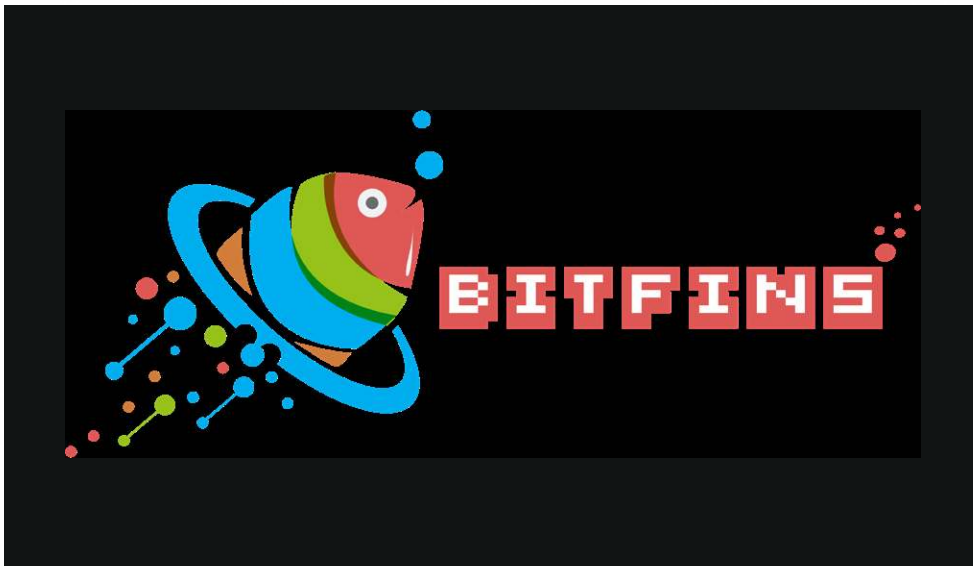

BitFins began with NFT fish on Cardano. Those original wallet-held items remain part of the aquarium. New fish are in-app collectibles, opening BitFins to people who have never owned an NFT.

INSIDE THIS SEA PAPER

03	The New Identity
04-07	The OG Fish Revamp
08	Future Collections
09-10	Aquariums and Fish Sizes
11-13	Activity Eggs and Breeding
14-15	Original Collectors and Trading
16-18	Visiting AR and Aquarium Life
19	Planned Releases

From Our Origins to Our Next Chapter

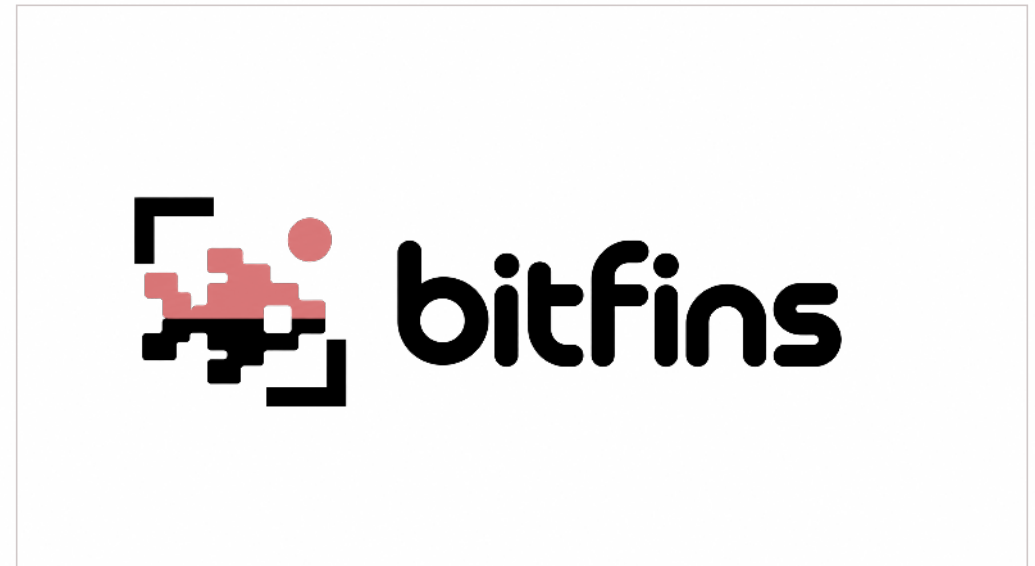

ORIGINAL IDENTITY

A Recognizable Beginning

Our original identity introduced a colorful, imaginative aquarium. It remains part of the collection's history and the community that helped BitFins begin.

NEW IDENTITY

A More Modern Expression

The new logo and coral red palette sit alongside cleaner layouts and more detailed creatures. The style is changing as the aquarium experience becomes more connected.

Original logo from the 2022 Sea Paper. New logo from the current BitFins brand identity.

The Original Fish Are Evolving

The OG collection is being reimagined with more natural surfaces, clearer anatomy and richer detail. Familiar shapes, colors and personalities guide the new designs.

Penguphin / New visual direction

The OG Collection

01 / OG SPECIES

Hawkfin

The green body, cyan fins, crest and antenna remain recognizable. The new design adds more natural textures and a more defined profile.

ORIGINAL 3D FISH

NEW STYLE

02 / OG SPECIES

Penguphin

The compact silhouette and blue, white and gold palette carry forward in a more lifelike creature with a familiar expression.

Original 3D artwork beside current visual studies. Artwork may be refined during development.

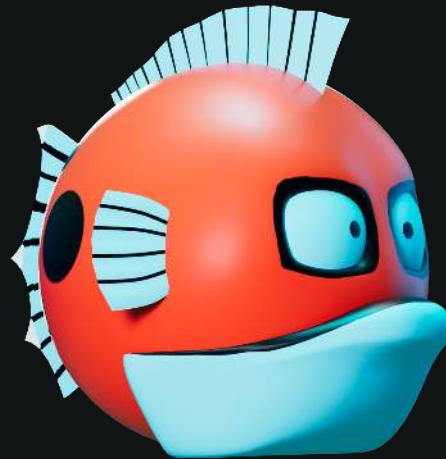

The OG Collection

03 / OG SPECIES

Jawbreaker

The bold coral body and cyan jaw remain central to the design. More detailed fins and surfaces bring the character into the new style.

ORIGINAL 3D FISH

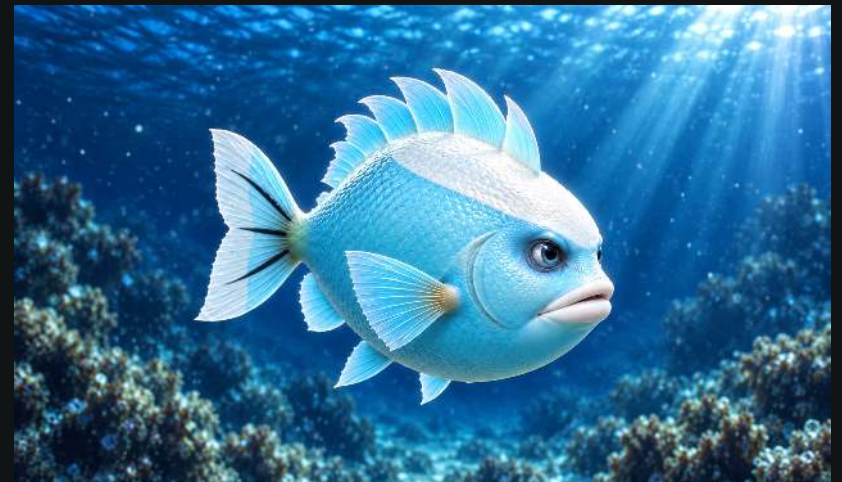

NEW STYLE

04 / OG SPECIES

Sawback

The pale blue body and distinctive dorsal fins remain easy to recognize. The revamp adds more depth to its shape and surface detail.

Original 3D artwork beside current visual studies. Artwork may be refined during development.

The OG Collection

05 / OG SPECIES

Discus

The blue and yellow palette and tall fins preserve the original fish's identity while the form gains a more natural sense of volume.

ORIGINAL 3D FISH

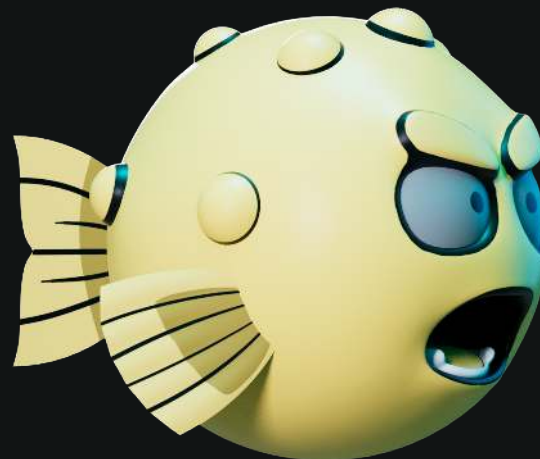

NEW STYLE

06 / OG SPECIES

Puffanha

The rounded body, raised bumps and expressive face remain part of the creature. The new style brings more detail to its unusual anatomy.

Original 3D artwork beside current visual studies. Artwork may be refined during development.

More Creatures to Discover

New collections will build on the same blend of realism and imagination, bringing BitFins exclusives together with familiar species from nature and creatures inspired by the world's past.

BitFins Exclusives

Unique creatures that belong to this world, with believable forms and details.

Hushmaw concept

Species from Nature

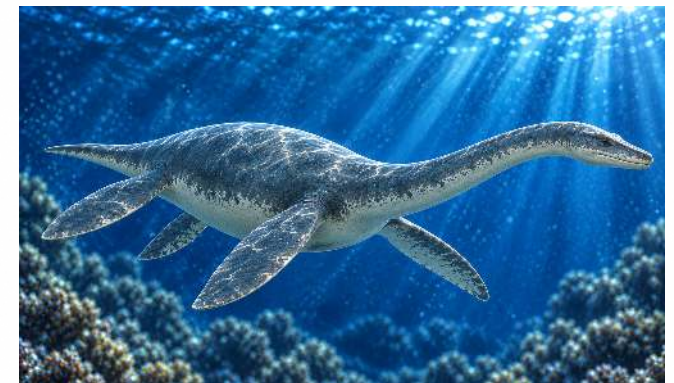

Favorite aquatic species from around the world, interpreted in the BitFins style.

Clownfish concept

Creatures from The Past

A direction that also makes room for species no longer found in nature.

Plesiosaur concept

These images are visual concepts. Future collections and species will be announced separately.

An Aquarium That Feels Like Yours

Classic decorating remains fundamental to BitFins. The revamped customization experience gives your collection a setting you can make your own.

Build Around Your Collection

Arrange fish and decor into a space you enjoy spending time in. Day and night cycles remain part of the aquarium's atmosphere.

Aquarium customization concept / Interface and controls may change

The collection, the setting and your everyday activity are being brought into one connected experience.

Size Belongs to Each Fish

Fish will have specific size tags, with variation between individual creatures. Two fish of the same species can have different sizes, including unusually small or very large examples.

Small

Medium

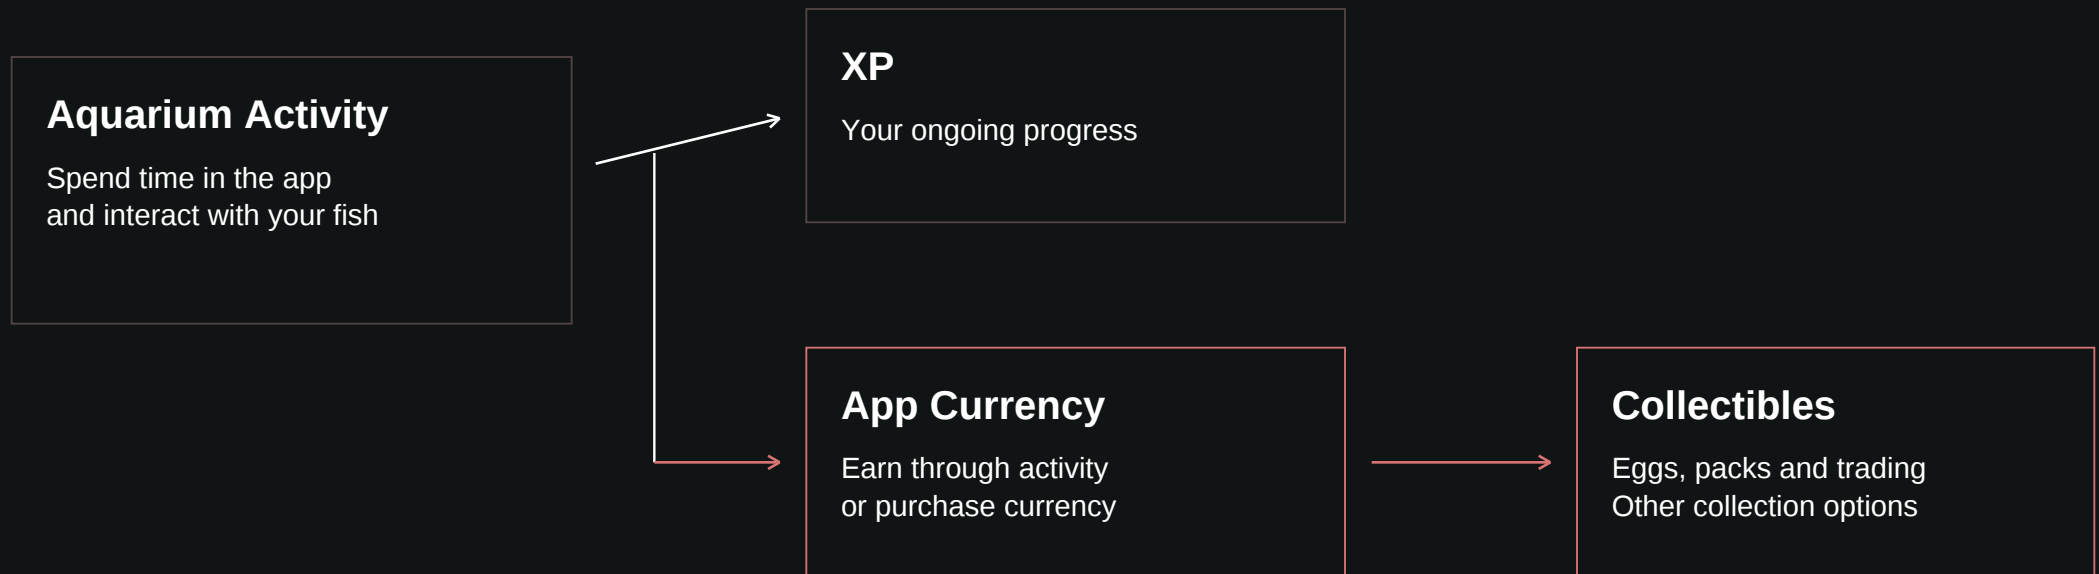

Large

The species stays the same. The individual fish helps define the scale and character of the aquarium.

Illustrative sizes and tag names. Final size categories may differ.

More Rewarding Time in BitFins

Spending time with your aquarium and interacting with your fish will be part of earning progress and rewards. XP remains in the app alongside a new currency system.

XP and currency have different roles. XP is part of progression; currency supports collecting and app activities.

Egg activity requirements still apply when currency is purchased. Final earning rates and costs will be shared as the system is confirmed.

A New Way to Meet Your Next Fish

Eggs will introduce new creatures to your collection. The proposed opening system connects each reveal to time spent with your aquarium and a currency redemption cost.

01 / AN EGG JOINS YOUR COLLECTION

02 / MEET ACTIVITY REQUIREMENTS

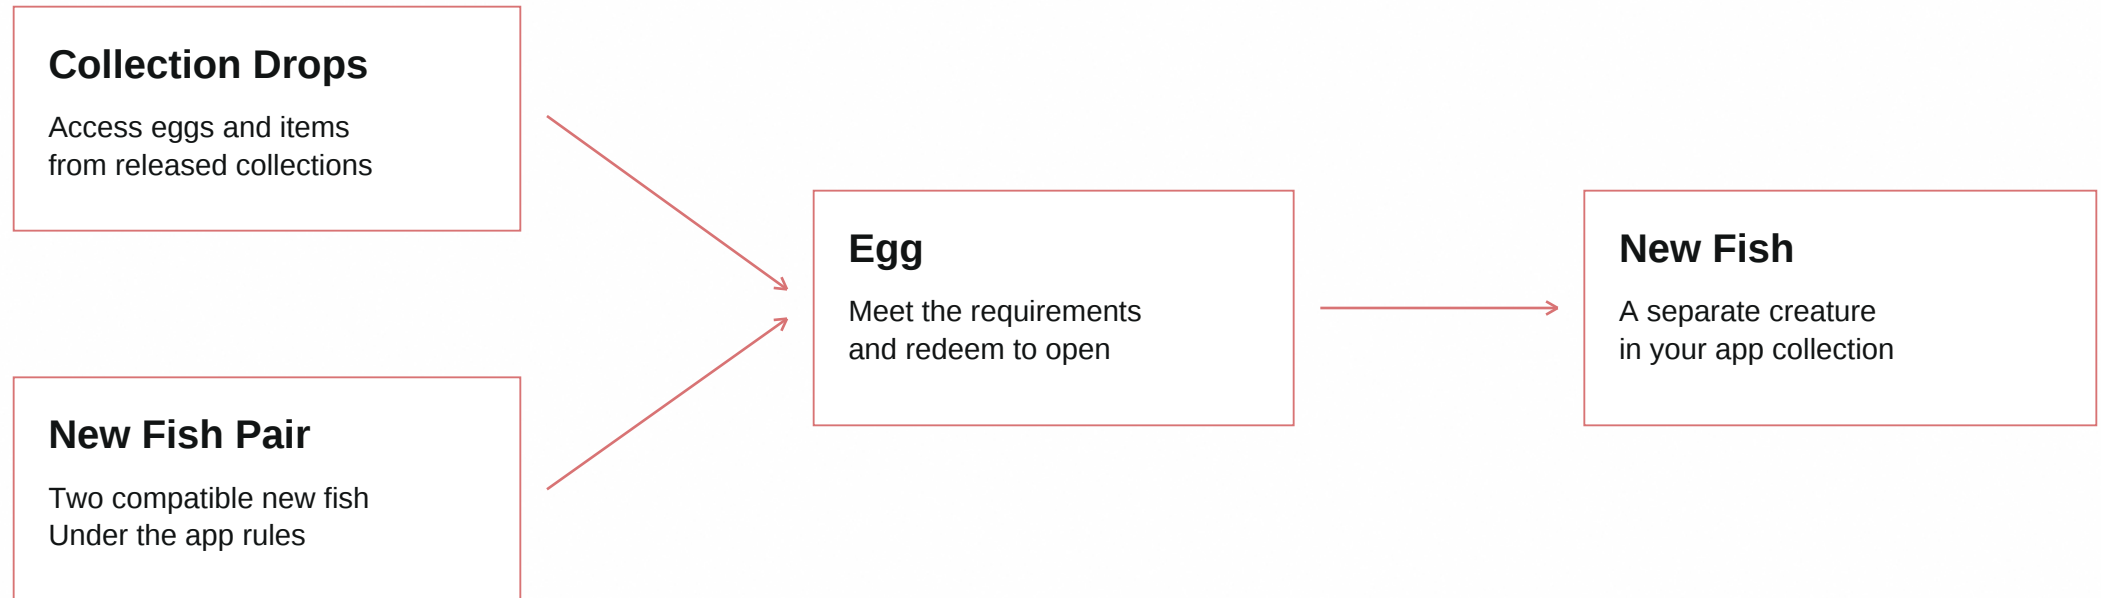

03 / REDEEM AND OPEN

Egg access may depend on active time and how long your aquarium has been open. Hatching adds a new fish to your collection.

Proposed opening sequence. Requirements, costs and reveal details are still being developed.

Drops and Breeding Work Together

Collection drops provide one route to new eggs and creatures. Breeding gives eligible new fish a separate role in growing your collection.

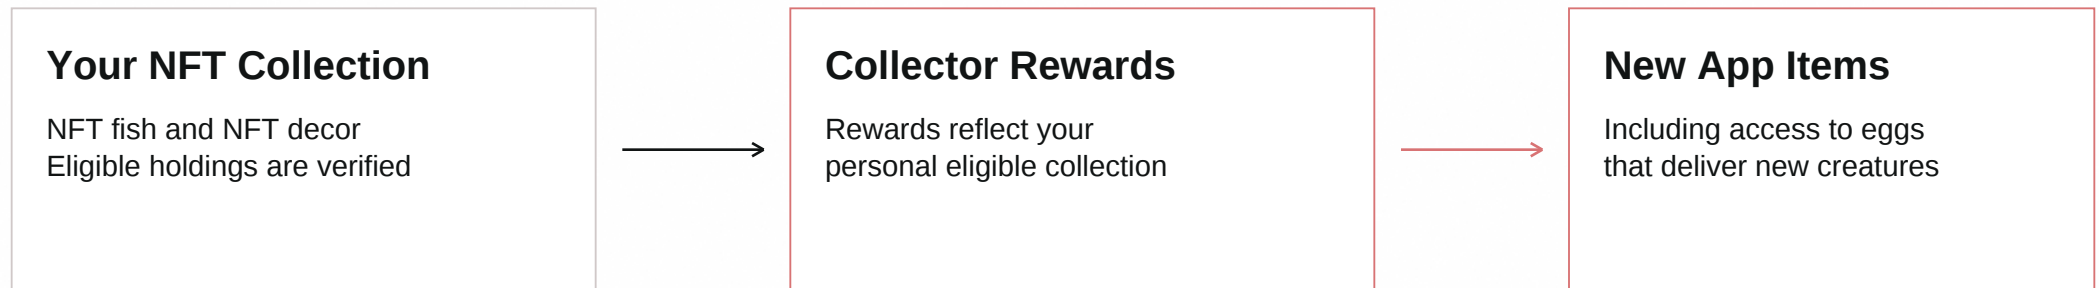

NFT fish and new fish do not breed with each other. Any breeding benefit for NFT fish will be confirmed with the original collector rewards.

Compatibility, limits, colors and rare outcomes will be explained before these systems open. The aim is to make each new creature worth discovering.

Recognizing The People Who Began It

Original collectors helped make BitFins possible. They will receive in-app rewards based on their personal collections and the eligible items they still hold.

New Creatures Alongside Your Originals

Reward eggs will deliver new creatures separate from the NFT fish already held. NFT fish and NFT decor remain usable in the aquarium while you own them.

Recognition Only Original Collectors Receive

Early adopter badges and special decorations will recognize the original community. Exact reward amounts, eligibility and timing will be shared when confirmed.

More Ways to Build Your Collection

NEW FISH / IN APP COLLECTIBLES

Discus visual study

Packs and Collection Releases

New releases and packs will offer more ways to discover creatures and add to your collection using the app's currency system.

Trading Between Collectors

Trading is planned as a way to find eligible fish and items from other collectors. It gives collections a life beyond the original drop or hatch.

Which items can be traded, the available trade types and any costs will be explained before trading opens. NFT fish remain distinct from new fish in the app.

Public Aquariums Are Returning

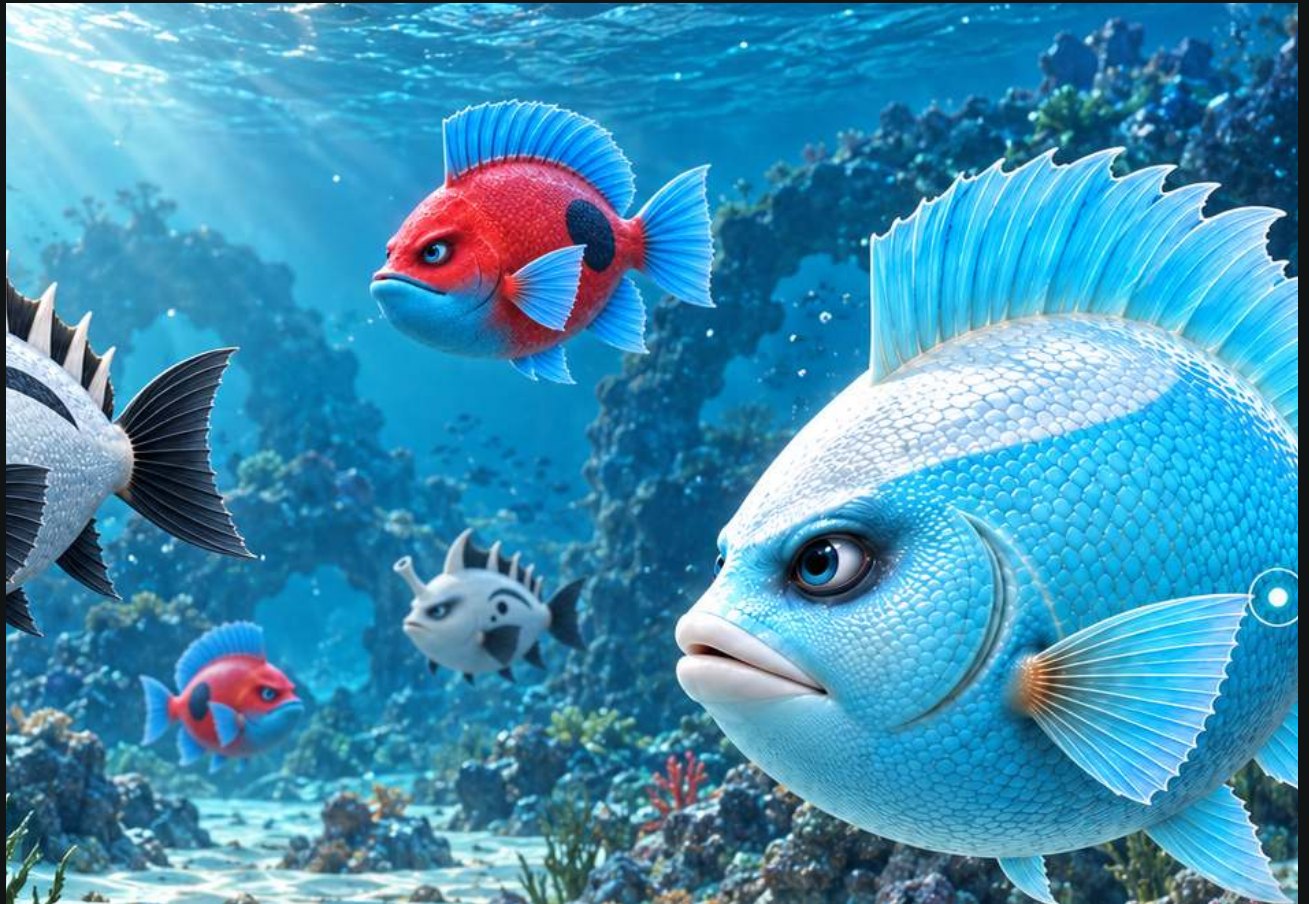

The revamped visiting system will make other collectors' aquariums part of the BitFins experience again.

Visit to see how someone else arranges their collection, enjoy their creatures in a different setting and find ideas for your own aquarium.

Rewarding Your Creativity

Earn rewards for designing a unique aquarium, receiving higher ratings and spending time curating your space.

Your aquarium can become a place for other people to explore.

Public aquarium concept / Final visiting interface may differ

BitFins in The World Around You

AR PHOTO CONCEPT

A More Immersive Photo Experience

Earlier AR photos had lower image quality and felt less immersive because of technical limitations.

The next version will bring multiple fish, animations and decorating tools into the world around you. Create photos and videos to enjoy your collection in new ways.

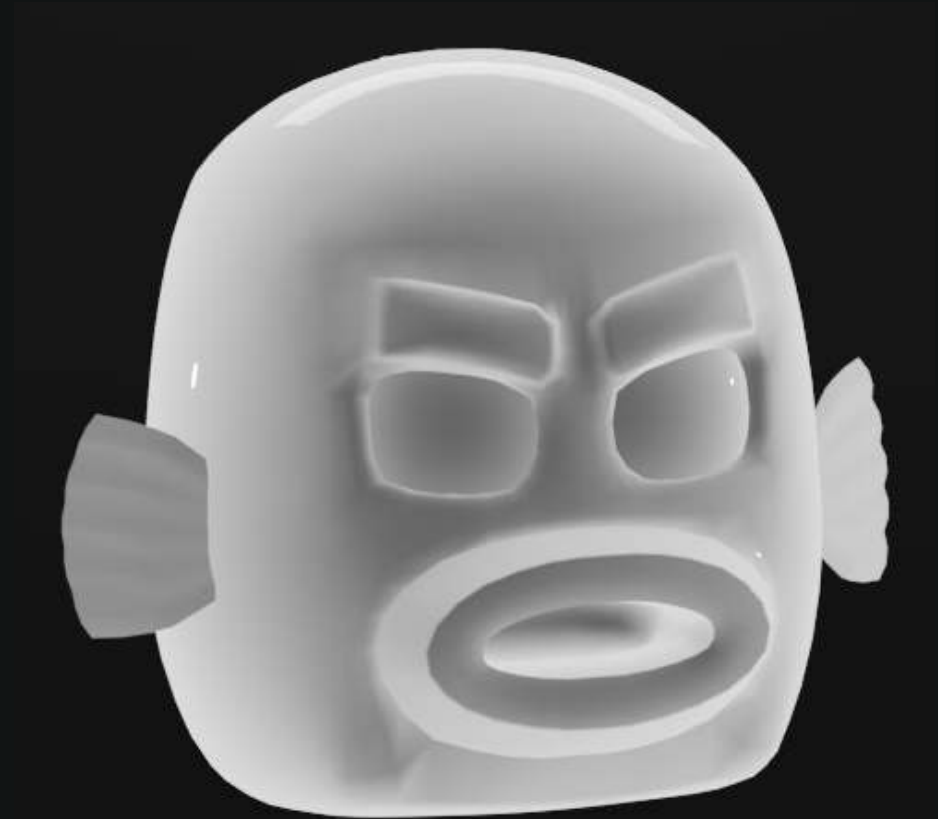

The concept shown illustrates the direction of the experience. Final tools and controls will be shared as they are confirmed.

An Aquarium That Changes Over Time

Day and night cycles remain part of everyday aquarium life. Alongside decorating and collecting, the aquarium is a place to return to and watch over time.

Ghost Fish Still Have a Place

Unique events within the aquarium can bring ghost fish into the experience over time. Those unusual discoveries remain part of the direction for BitFins.

Original ghost fish artwork from the 2022 Sea Paper. Event details and future visuals will be confirmed separately.

The Release Direction

PLANNED BETA WINDOW

Q4 2026

October to December 2026

PLANNED FULL RELEASE WINDOW

Q1 2027

January to March 2027

Planned for The Beta Update

The OG Collection Revamp

Redesigned fish and individual size tags

Aquarium Customization

Decorating with day and night cycles

Activity and Progression

XP alongside a new currency system

Eggs Breeding and Trading

New ways to discover and collect creatures
